DETAILED ACTION

1. Claims 5 and 14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 5, "the first and second spacers" lacks antecedent basis in the claims and the specification and spacers are not shown in the drawings. For the purpose of this Office Action, it is assumed that applicant meant "the first and second yokes".

In claim 14, line 2, applicant erroneously claims hitch members pivotable at least 360 degrees relative to the respective first and second yokes. However, it is clear from applicant's drawings that the base of each yoke prevents the hitch members from pivoting by more than approximately 180 degrees.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-13 and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by Parent.

Parent shows a hitch with first and second yokes 38, 40, each having a base and parallel arms. The bases are interconnected by a longitudinal bolt 66, held by a nut and in cooperation with washers 174, 176. Each arm has a hole 60, 62, 84, 86, that accepts a pivot pin 48, 88. The pivot pins connect the yokes to hitch members 34, 92, which attach to respective vehicles.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

MacApline, Arman, Martin and Butler each show three-axis hitches.
